INTRODUCTION

Overview of the organization

- Mita IT Automations Pvt. Ltd. is a leading software development company based in Dindigul. Since 2017, they have been delivering cutting-edge digital solutions, helping businesses grow with technology-driven strategies.
- MITA IT Automations provide a powerful suite of tools that can greatly enhance the efficiency and reliability of IT operations. By focusing on expanding integrations, improving user support, and providing more advanced training and documentation, MITA can further solidify its position as a leading provider in the IT automation space. The platform's scalability, comprehensive features, and user-friendly design make it a valuable asset for any organization looking to streamline their IT processes and reduce operational costs.
- During the initial phase of my internship, I was introduced to the atmosphere of a MNC on how does a IT company works. Then I worked on mastering HTML tags and attributes, implementing it in a simple project, and understanding frameworks such as Flask and Django. One of my key accomplishments during this phase was the creation of a responsive website, which showcased my ability to build interactive and user-friendly websites.
- As the internship progressed, I delved deeper into back-end technologies, where I learned server-side programming and database management. I gained hands-on experience with frameworks and tools like Flask, Django which are critical for building dynamic and scalable web applications. Additionally, I learned about Postman API and integrated them with front-end interfaces to create seamless user experiences.
- Working at Mita also exposed me to industry-standard development workflows. I learned about version control systems like Git.
- This internship at Mita IT Automations not only strengthened my technical skills in backend development but also enhanced my problem-solving abilities, communication skills, and adaptability in a professional setting. It was an enriching experience that has prepared me for future challenges in the field of software development.

TRAINING OBJECTIVE

The primary objective of this report is to give a clear view on internship at **Mita IT Automations Private Limited**. The report aims to provide a comprehensive analysis on working of **Mita IT Automations Private Limited**, offering insights, recommendations, and relevant information to target public.

STUDENT'S WORK ASSIGNMENT

- To understand and implement the fundamentals of python development such as list, tuple, dictionary.
- To understand and implement the functions, in various methods in python.
- To design and create a simple website using flask(username, password and login)
- To design and create a website using flask and connect it to a database.
- To explore and utilize version control systems like Git for effective project management and collaboration.To understand industry-standard workflows, including debugging, performance optimization, and secure application development practices.

TECHNICAL SECTION

First Week (01.07.2025 to 04.07.2025)

About IT Companies

IT companies are broadly categorized into service-based firms like TCS and Infosys that provide solutions to clients, and product-based firms like Google and Microsoft that build their own software. These companies have various departments including software development, IT infrastructure, QA testing, cybersecurity, and project management. They commonly use technologies like Java, Python, React, MySQL, AWS, and DevOps tools such as Docker and Git. Roles range from developers and testers to UI/UX designers and data analysts. Most companies follow Agile methodology and the Software Development Life Cycle (SDLC) to manage projects efficiently. A career in IT demands strong problem-solving skills, programming expertise, and familiarity with version control, APIs, and cloud platforms. Work culture in IT is typically fast-paced, collaborative, and focused on continuous learning, with remote work becoming more common.

Second Week (07.07.2025 to 11.07.2025)

HTML and Python

HTML (Hyper Text Markup Language) is an integral part of the front-end aspect of backend development. HTML is used to structure the content of web pages, defining elements such as headings, paragraphs, images, and links, essentially providing the skeleton of a web application. Python is a versatile, high-level programming language known for its readability and simplicity. It's interpreted, object-oriented, and dynamically typed, making it popular for web development, data science, automation, and scripting across various platforms. Its extensive libraries and supportive community contribute to its widespread use.

Third Week (14.07.2025 to 18.07.2025)

Flask Framework

Flask is a popular Python web framework that allows developers to build web applications quickly and efficiently. It's classified as a microframework because it provides core functionalities without forcing specific tools or libraries, offering flexibility. Flask is often used for developing web applications, APIs, and microservices.

Fourth Week (21.07.2025 to 25.07.2025)

Database(MySQL)

A database is a structured system used to store, manage, and retrieve data efficiently. In Backend development, databases can be relational like MySQL or non-relational like MongoDB. Databases are crucial for handling data persistence, allowing applications to store user information, transaction records, and other dynamic content. They support querying, updating, and maintaining data, enabling applications to function effectively and scale.

Fifth Week (28.07.2025 to 31.07.2025)

Creating a website

Building a dynamic website with **Flask**, **Python**, and **SQL** creates a robust web interface. Flask handles web requests and renders HTML. Python powers the backend logic for data processing and database interaction. SQL manages data storage (create, read, update, delete) in a relational database like MySQL, enabling interactive web applications.

PHOTOGRAPHS OF (TECHNICAL SECTION) PROJECTS

PROJECT-1: A SIMPLE LOGIN WEBSITE

PROJECT-2: WEBSITE USING DJANGO

PROJECT-3: USER FORM WEBSITE

The screenshot shows a web browser window with multiple tabs. The active tab is titled 'Flask Form'. The address bar shows the file path: `C:/Users/USER/AppData/Local/Programs/Python/Python312/Programs/flaskprojects/flask_mysql_app/templates/...`. The main content area displays a form titled 'User Form'. The form contains two input fields: 'Name:' and 'Email:', each followed by a text box. Below these fields is a 'Submit' button. The browser's taskbar on the right shows various application icons.

User Form

Name:

Email:

PROJECT-4: WEBSITE USING FLASK, MYSQL

The screenshot shows a web browser window with multiple tabs. The active tab is titled 'Enter Username'. The address bar shows the file path: `C:/Users/USER/AppData/Local/Programs/Python/Python312/Programs/flaskprojects/flask_username/templates/...`. The main content area displays a form with the heading 'Enter your username'. Below the heading is a single text input field followed by a 'Submit' button. The browser's taskbar on the right side shows various application icons.

PROJECT-5: CONTACT FORM USING DATABASE.

The screenshot shows a web browser window with multiple tabs. The active tab is titled 'Enter Your Details'. The address bar shows the file path: `C:/Users/USER/AppData/Local/Programs/Python/Python312/Programs/flaskprojects/flask_task/templates/index...`. The main content area displays a contact form with the heading 'Enter your details'. The form includes the following fields: 'Name:' (text input), 'Age:' (text input), 'Gender:' (dropdown menu with 'Male' selected), 'Phone:' (text input), and 'Email:' (text input). A 'Submit' button is located at the bottom right of the form. The browser's taskbar on the right side shows various application icons.

PROJECT-6: TUITION CENTRE ADMINISTRATION WEBSITE USING HTML,CSS,JAVASCRIPT,PYTHON(FLASK),MYSQL & POSTMAN.
